

Rules of Play

1. The object of the game is to place all your buildings within the walls of the city while preventing your opponent from doing so.
2. A move consists of placing a building anywhere in the city so that it is lined up with squares.
3. If you are playing with the bright buildings, you commence the game by placing the "People" anywhere within the city. Your opponent playing with the brown pieces makes the first and each alternative move.
4. If you completely enclose a part of the city with your buildings alone or with your buildings and the wall, this part of the city becomes your property and your opponent may not place any of her/his buildings within it. The buildings must meet wall to wall. A corner to corner contact is not acceptable. Your opponent may claim space in the same way. You may not use the "People" as part of the boundary to enclose the claim space. Neither you or your opponent may claim space on your first move. (See notes 1, 2 & 6)
5. If you enclose and therefore isolate one and only one of your opponent's buildings or the "People", you may remove it and claim the space enclosed. The building must be removed immediately after the move during which it was enclosed otherwise it must remain where it is and the space is still available to your opponent. Your opponent's building may be replayed in a later move but the "People", once removed, is not replaced for the remainder of the game. If you enclose two or more buildings, one of which may be the "People", then none of the buildings may be removed and the space is still available to your opponent. (See notes 3, 4, & 5)
6. The game ends when no further moves can be made by either player.
7. The winner is the player who succeeds in placing all of her/his buildings within the city while preventing her/his opponent from doing so. If neither player succeeds in doing this then the player whose unplaced buildings would occupy the least number of squares is the winner otherwise the result is a draw.
8. If a series of games is played, the players alternate in making the first move. At the end of each game players are awarded points equal to the number of squares their unplaced buildings would cover. The winner of the series is the player with the **smallest** total of points.

Strategy

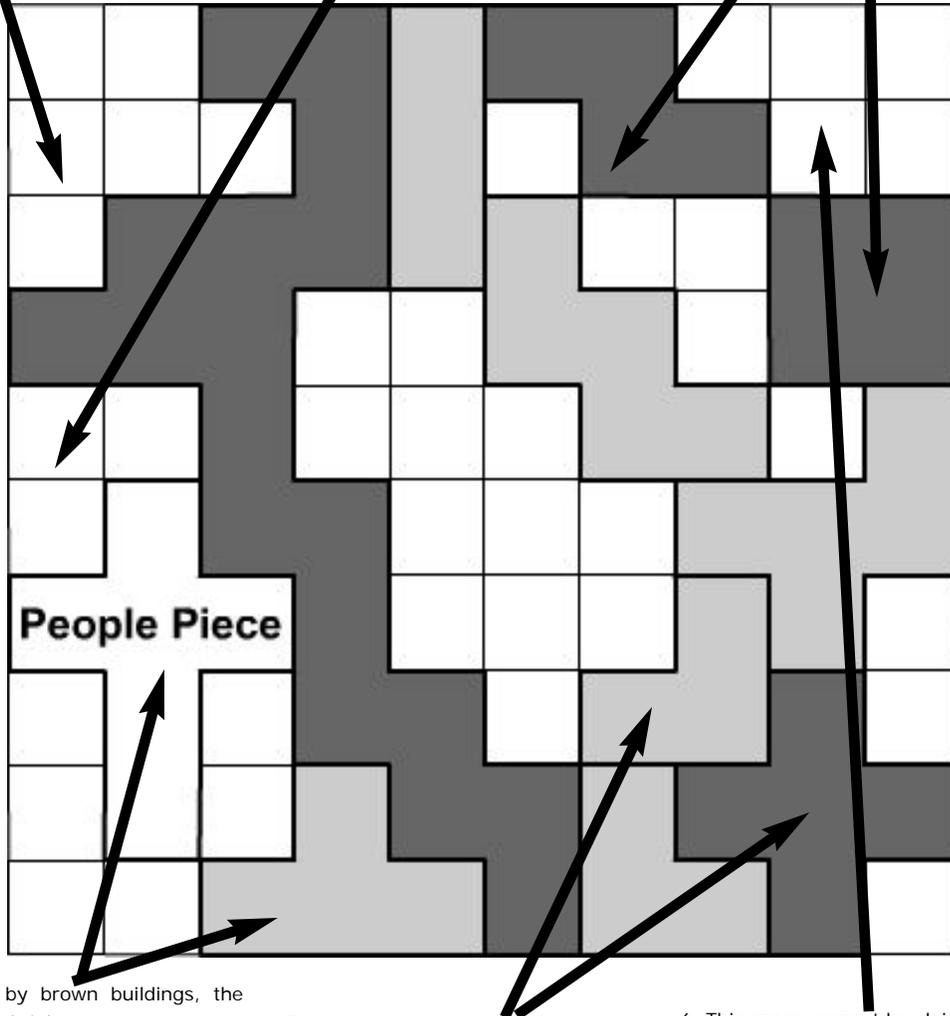

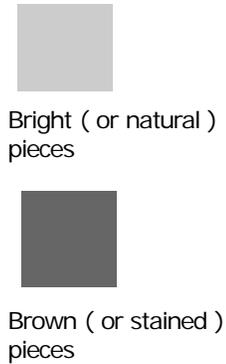

- A** Concentrate on claiming space in the early stages of the game.
- B** Play your largest buildings first.
- C** Be careful not to let any of your buildings get captured.
- D** Never play your buildings in your own space while there is unclaimed spaces available.
- E** Never give up until the last building is played.

Notes on the Rules

1. This space is enclosed by and claimed for the brown buildings. Only brown buildings may be placed within it.

2. Although enclosed by bright buildings, these brown buildings may not be removed from the enclosed space. The space remaining is still available to both players.

3. This space cannot be claimed for the brown buildings as the "People" may not form part of the boundary of the enclosed space.

4. Although enclosed by brown buildings, the "People Piece" and the bright manor are secure and may not be removed. The space remaining in this enclosure is still available to both players and may not be claimed for the brown buildings.

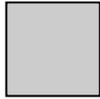

5. When the bright inn is played in the position indicated, the brown infirmary is enclosed and isolated and may be removed. The space may then be claimed for the bright buildings.

6. This space cannot be claimed for the brown buildings as a point to point contact does not form a boundary

Tournaments

Tournaments are always popular. In a tournament you have TWO games with each opponent and use different colored pieces for each game so that YOU make the first move in one game and your opponent makes the first move in the other. Points are awarded to each player at the end of a game according to Rule 8 and these points are accumulated as the tournament progresses. The winner is the player with the smallest total of points after everyone has played the stipulated number of games, usually ten. It is also helpful to arrange that everyone plays the same number of different opponents.
