

Don't You Dare™

Don't You Dare™ is an entertaining way to tease and torment your friends by locking one of their prized possessions in this wooden contraption. You'll see them flip, shake, and even beg as they struggle to free it.

But after all, what are friends for?

To lock the puzzle:

Remove rod "A" (long rod) from inside the puzzle.

Place your friend's possession inside the puzzle and remove peg "B" (short peg) from the locking hole.

Place one end of rod "A" in empty locking hole, and the other end into the top hole. Push the rod upwards and hold it into position.

Rotate the puzzle 5 or 6 times in a clockwise motion until the rod is locked into place.

To unlock the puzzle:

Sign a contract outlining promises to be kept once the possession is released.

Rotate the puzzle in a counterclockwise motion until the locking mechanism is released and rod "A" falls free.

Please note: Often the humidity level in the atmosphere causes the wood to swell thereby causing the mechanism to block.
